CCM Project

CCM Project

Idea

- Give a quick insight into all systems with real KPIs
- Connect with documentation, notes and teams
- No manual work

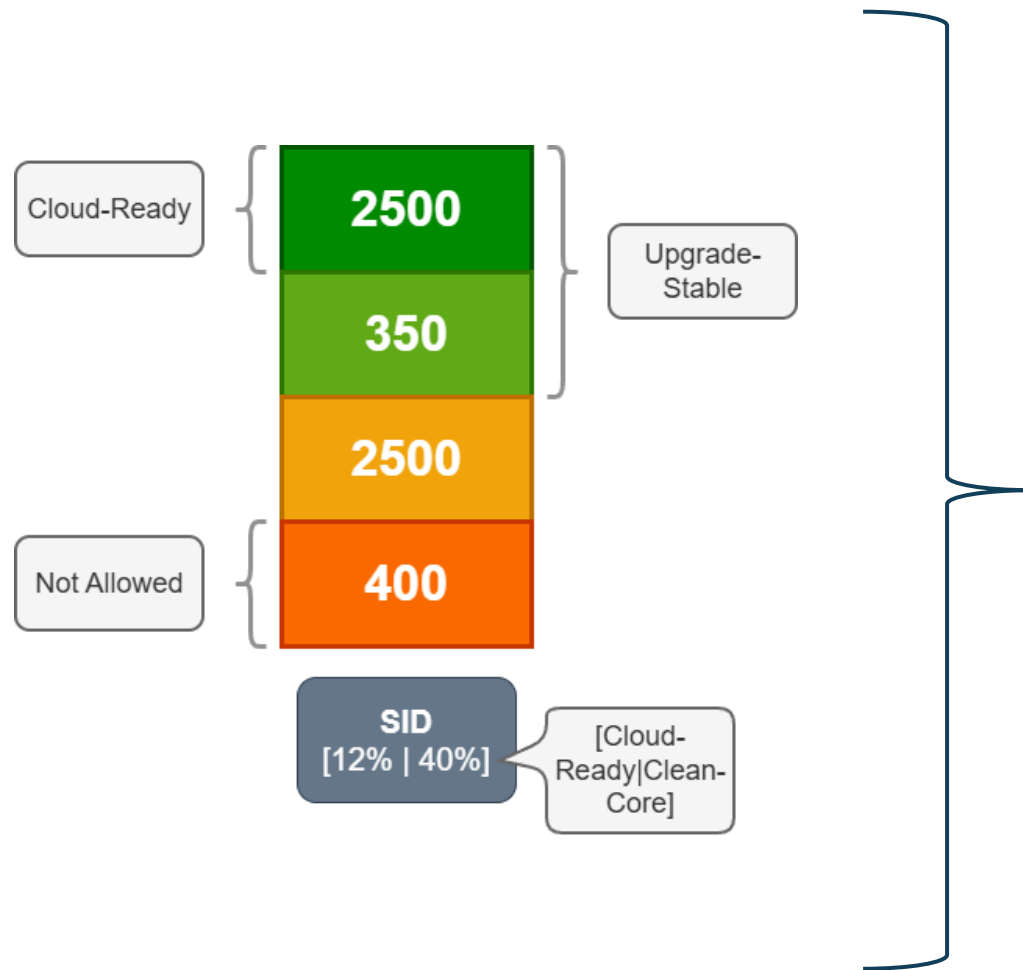

Requirements

- Building near to the Central ATC instance (reuse configuration and results)
- Flexible configuration
- Custom numbers and KPIs

CCM Project

CCM Project

10

Technical Debt Score

Calculation of the score with a weighting (E → 10, W → 5, I → 1)

- 3 x Error = 30
- 10 x Warning = 50
- 3 x Information = 3
- **Full score = 83**

Classification

The highest message classifies the object at a specific level.

Example (left):
Level D

CCM Project

APIs

- Missing APIs for Automation
- Texts for Checks and Messages

Deployment

- Different abapGit Version

Setup

- Complex Setup with many steps

Demo

Demo

- ✓ Dashboard with system overview
- ✓ Assignment to documentation and clusters
- ✓ Insights into Objects, Used APIs, Checks and Clusters
- ✓ Manage custom APIs
- ✓ Easier setup
- ✓ Jobs for Loading, Auto Approval
- ❖ Different roles and authorization
- ❖ Custom KPI with exemptions, documentation and APIs
- ❖ Trend diagram
- ❖ Category for clusters for better filtering

Conclusion

Conclusion

Start

- Standardization and Clean Core for all upcoming features
- Architecture board

ATC

- Activate ATC
- Show developers what they did
- Block Clean Core findings

Measurement

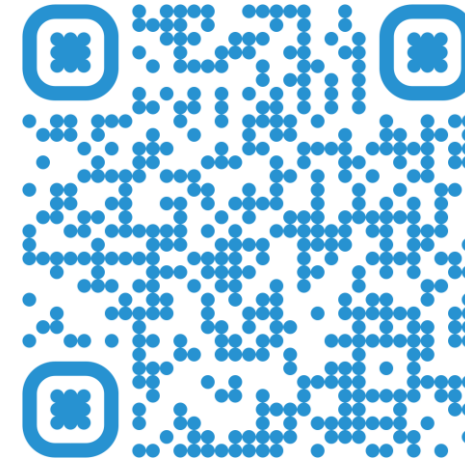

- Helps visualize work and technical debt
- Display improvement over time

Thanks
